

On the app startup, the user enters a numerical value into the top text box with the grey text hint. The user is the primary actor using this system. The system contains two text boxes and a convert button. One Edit text box for the temperature in Fahrenheit. The other is a Text view box to display the result in Celcius. The button is used to convert the stored value on a click. The goal is to convert a temperature in Fahrenheit to Celcius.

Temp in Fahrenheit

Convert

Temp in Celcius
